VINEYARD

This vineyard is located in the coastal part of the valley. This is an alluvial terrace interrupted by great ravines formed long ago by rivers that today are dry but have ample vegetation at their base.

CLIMATE

There are lots of small thorny bushes and wild scrub and, on the northern and western slopes of the ravines (the sunniest), there are a lot of cacti. Here the valley is very wide, with great visibility because of the purity of its air and the scarcity of buildings. It is windy in the afternoons and is technically classed as a cool area for wine production.

SOIL

In the coastal area where this vineyard is located (29km from the sea), the alluvial terrace reveals different levels of clay at the surface. This gives way to a matrix of alluvial soil (volcanic rock which was rounded by erosion as it was carried many kilometers from high up in the mountains). This soil is very stony but has veins of limestone in the form of dust, mainly consisting of calcium carbonate. The limestone rocks in the high peaks of the Andes mountains were dragged by melting ice to the lower parts of the valley and deposited there as dust mixed with alluvial soil. This phenomenon is what marks the Limarí Valley as immediately different from Chile's other wine regions, as limestone produces very refreshing, mineral wines in a style quite different to those from the rest of the country, even cool areas.

PRODUCTION AND AGEING

Every single task in the vineyard, from pruning to harvesting, is carefully supervised by our viticultural and winemaking team in order to produce the best quality fruit possible. The grapes were hand-harvested into 20kg-bins to avoid any damage to the fruit. The harvesting of the Syrah grapes began in the second week of May and the Carmenère in the first week of June. The clusters were later very carefully selected, then destemmed and selected one last time. The fermentation took place in stainless steel tanks at controlled temperatures. The maceration occurred after the alcoholic fermentation. The wine was aged in French oak barrels for 12 months.

TASTING NOTES

Of a deep, violet-red colour, this wine surprises with its aromas of ripe black fruit, spices and nutmeg. In the mouth, it has a rich and powerful structure, together with a balanced acidity that gives it great aromatic persistence. A delicious blend to which each variety contributes attractive character.

TECHNICAL INFORMATION

Winemaker: Felipe Müller
Varieties: 54% Syrah 43% Carmenère
3% Cabernet Sauvignon
Alcohol (Vol%): 14%

PH: 3.49
Total Acidity: 3.43 g/l (Tartaric Acid: 5.25 g/l)
Residual Sugar: 3.34 g/l
